PACKMASTER

Ipeka PackMaster is a versatile packaging machine for different types of bread products. The equipment includes one or two bag opening blow tables, stepping band conveyor and clip-closing unit. Two table model is able to use by one or two operator.

Operator pushes the bread to a pre-opened bag and continues to band conveyor. Conveyor moves forward step-by-step to the clip-closing station and after forming the closure, ready bag continues forward to rotating collection table for example. With two operator use it's able to reach the capacity up to 45 bags per minute.

Ipeka delivers also total slicing and packaging lines. Our Masterslicers can offer you the most efficient alternative for slicing of white or dark bread. Packmaster is designed to easily combine with Ipeka slicer. We deliver also high quality clip-closing bands.

CL-35

Another choice for semiautomatic packaging is the most classical Ipeka packaging machine CL-35.

The product is pushed by hand into the bag which is pre-opened by air flow. The push releases the bag from the holder, and the bagged product slides to the closing station. The closing station is steplessly adjustable according to the product size.

The bags are sealed by a clip-closing band, which is of plastic stiffened with steel wire in both edges. The clip width is 8 mm and for one closing the required length is approximately 50mm.
